____ **Management in Logistics Networks and Nodes**
Concepts, Technology and Applications

Edited by Prof. Dr. Thorsten Blecker, Prof. Dr. Wolfgang Kersten and Prof. Dr. Carsten Gertz

2008, IX, 443 pages, with illustrations, softcover, USD 99,00 / GBP 55,00; ISBN 978-3-503-11227-2
Operations and Technology Management Vol. 8
Erich Schmidt Verlag

Target groups: corporate governance organs; logisticians; members of industrial enterprises;
management consultants; IT-experts

About this book: Today, there is a huge variety of logistics networks – ranging from very simple locally oriented chains to internationally operating complex systems. However, each of these networks is formed by logistics nodes connected by different types of edges. Various questions arise during build-up and operation of these systems.

This volume, edited by Thorsten Blecker, Wolfgang Kersten and Carsten Gertz provides a valuable insight into:

- new concepts for transportation and supply chain management

- latest findings in the area of distribution management
- service-oriented architectures and agency approaches for efficient and effective network and node management
- pioneering technologies for logistics such as Auto-ID.

With this book readers will obtain information on how to plan and optimize logistics networks supported by modern IT and management concepts.
